

Project 2 Description

Create an application that modifies the "ColorGrid.html" file by using the images collection to add event handling code to color the border of the cell images red and black when the "Change Color" button is selected (see the "FinalGridImage.JPG" file). The initial view is shown in "InitialGridImage.JPG".

- The color attributes are controlled by an external style sheet, "GridImageHandler.css", that contains two class selectors (i.e. one for the color red; one for the color black).
- The event handling code is contained in a JavaScript file, "GridImageHandler.js", that is accessed using the "src" attribute of the "script" element.

Save and upload the HTML file, JavaScript file and CSS file within a zip file Project2.zip.

Note: Will be required to activate the appropriate event for the JavaScript function to execute.
